LOCKONE

Our Approach

Advanex Europe are proud to introduce the **new revolution** in thread locking, with our spring technology and expertise we have designed a range (M5 to M24) of **special spring devices** for preventing nut & bolt joints from loosening through vibration.

The spring is applied using a normal spanner or socket wrench and when the nut is tightened onto a bolt, it grips the bolt thread and **prevents the nut** from loosening.

Our initial tests shows that the spring device not only **out performs** most other locking methods, but is also re-usable and **non destructive** method of locking and unlocking the nuts and bolt joint

LOCKONE

Time Saving!
Quick and easy method!

Foreign Object Debris (FOD)-Free Design.
No solvents means a clean free bolt which can be re-used

Re-Usable!
Easy to remove and re-use
